ASLA/ASLE SLIM-TEMP UNIT COOLER

Low and Medium Temperature
Small Walk-in Coolers & Freezers and
Display Cases

Air Defrost
4,800 to 17,300 BTUH

Electric Defrost
4,600 to 16,200 BTUH

SLIM-TEMP

Features

The Slim-Temp ALSA / ASLE Unit Coolers are compact and versatile products that are designed for cooling small walk-in coolers and freezers and display cases. Units feature smaller diameter tubing that reduces total refrigerant charge, energy-efficient EC motors that are IP67 rated to protect against dust, sand and water, and the slim profile maximizes available shelf space. Units are available with air or electric defrost, for low or medium temperature applications.

Standard Features

- Models meet DOE AWEF performance and California Title 24 regulations
- Dual Speed EC Motors
- All models require externally equalized Thermostatic expansion valves
- ASLA capacity ratings at +25°F evaporator temperature
- ASLE capacity ratings at -10°F evaporator temperature.
- All Aluminum low silhouette housing
- Fan motors are totally enclosed, permanently lubricated and thermally protected
- Electrical connection made at internal terminal blocks located at end opposite refrigerant connections for easier installation
- UL & cUL listed
- NSF approved

Optional Features

- Protective Russ-Proof epoxy coil coating extends the life of the coil

Slim-Temp Display Case	Defrost Type	Number of Fans	Fins Per Inch	BTUH in Hundreds	Unit Voltage	Motor Type	Revision
	A - Air E - Electric	2 - 6 fans			A - 115/1/60 D - 208-230/1/60	D - Dual Speed EC	

EVAPORATOR APPLICATION RATINGS

Multiple conditions combine to determine the application capacity of an evaporator. Walk-in space temperature, relative humidity, saturated suction temperature difference, and outdoor ambient temperature. All of the factors are considered when calculating an evaporator application rating. These ratings are considerably higher than the net capacity value used for DOE ratings (AWEF).

The AWEF of an evaporator is calculated using the dry coil capacity and the daily evaporator power consumption. Power consumption included fan and defrost power. Evaporator net capacity reported to the DOE database is dry coil capacity less the full power fan watts. DOE test conditions are at 10°F evaporator/SST temperature difference and less than 50% relative humidity and 96°F liquid temperature. These conditions create a uniform test method, but should not be used for equipment selection. The equipment selected would be too large for the application.

Russell's published application ratings are a guideline for proper equipment selection. They account for true operating conditions experienced by equipment.
